EVENT REPORT

ASSEMBLE THE BOTS

As a part of Pravidhi 2022, ACROM-IEEE RAS organised an event – assemble the bots.

The teams had to dismantle and reassemble a robot in the shortest time possible and in this way, students got a chance to learn the inner workings of a robot and how it is built.

The event saw a registration of 12 teams with maximum three members per team. Once the bot was handed over to a team, they had 5 mins for observation, followed by 5 mins for dismantling and 10 mins for assembling. The accuracy of connections was checked and correct connections were awarded 10 marks. In case of a tie timing was used as a tie-breaker. Team that took the shortest time with correct connections got a bonus of 5 marks.

Overall, it was an engaging event with a good learning experience. The participants got to explore and fiddle with all parts of the robot and enjoyed it thoroughly.
