

EVENT REPORT

FAST AND FURIOUS – A BOT RACE

As a part of kalanjali 2022, ACROM-IEEE RAS organised an event – Fast and furious – a bot race.

The participants were provided with a robot and the main objective was to race through the track. The track had multiple obstacles and the teams were supposed to navigate through it in the shortest time possible. To make it more exciting two checkpoints were arranged with challenges. The first challenge was to complete a picture puzzle and the second was to build a pyramid out of cups. The teammates had to pass on the bot after finishing the challenges.

Every time a participant touched an obstacle an additional time of 2 seconds was added to their original time taken. If the bot went out of the track 5 seconds were added and if in any case the participant touches the bot 10 seconds were added. If the bot falls off the track the team would be disqualified.

The event saw a registration of 23 teams with maximum three members per team. Students were thrilled to attend the programme. It was a great experience for the students in aspects such as team work, collaboration and time management.
